

City of Palm Springs Final Report

2018-19 Pavement Management Program Update

January 23, 2019

Prepared by:

January 23, 2019

Marcus Fuller
Asst. City Manager/City Engineer
3200 East Tahquitz Canyon Way
Palm Springs, CA 92262

Subject: Final Report – 2018-19 Pavement Management Program Update

Dear Mr. Fuller:

As part of the development of the Pavement Management Program for the City of Palm Springs, Harris & Associates hereby submits this Final 2018-19 Update of a Pavement Management Report.

The information contained in this report presents the findings from the development of the system data associated with the pavement condition survey of the City's street network. The City is also provided with the information that was used to develop the recommended improvement program. The report covers the following categories:

- Pavement Condition Summaries
- Preservation and Repair Activities

It has been a pleasure working with the City on developing the City's Pavement Management Program. Should you have any questions or comments, please contact us at (925) 827-4900 ext. 1219 or vijay.pulijal@weareharris.com.

Sincerely,

Harris & Associates

Vijay Pulijal, PE
Senior Project Manager

- IV. Section PCI Listing Report

EXECUTIVE SUMMARY

In July to September of 2018, Harris & Associates updated the Pavement Management Program (PMP) for the City of Palm Springs. For this update, the entire network of streets were visually surveyed to assess the existing surface condition of each individual pavement segment throughout the City. Streets that received maintenance since 2016 were not surveyed in this update. The PMP provides a management tool to inventory street pavement, assess pavement condition, record historical maintenance, forecast budget needs, and view impacts of funding on citywide pavement condition over time.

The PMP is also a software-based tool for analyzing pavement conditions and recommending rehabilitation strategies based on funding levels. The software focuses on providing cost effective recommendations that enhance the overall system Pavement Condition Index (PCI). In general, asphalt concrete pavement deteriorates over time by both traffic loading and weathering. The software recommends that a percentage of the budget be put to preventive maintenance treatments such as surface seals or crack seals. The remaining budget is programmed for more expensive asphalt concrete overlays and reconstruction. Preventive maintenance treatments are important because they can sustain a street's PCI at a high level and at relatively low cost. Preventive maintenance treatments can be applied to many streets (large pavement area) with a positive effect of raising the system PCI for a fraction of the cost to overlay asphalt one street (small pavement area).

The City currently uses the Pavement Management Program StreetSaver® online version. The City uses the software to help make cost-effective decisions related to the street network, maximizing the City's return on investment from available maintenance and rehabilitation funds; generating a prioritized plan; and identifying specific areas in need of maintenance and rehabilitation.

Harris & Associates recommends that all roads be re-inspected over the course of the next four years (approximately 25% of the streets every year).

◆ **Replacement value & quantity of pavement**

The pavement network within the City of Palm Springs has 245 miles of paved surfaces. This equates to 50.8 million square feet of pavement. The estimated replacement value of this pavement is over \$745 million.

◆ **Condition of City's pavement**

The City of Palms Spring's road network is "Satisfactory" with an average Pavement Condition Index of 73, with 100 being a brand new street and 0 being badly deteriorated street with virtually no remaining life.

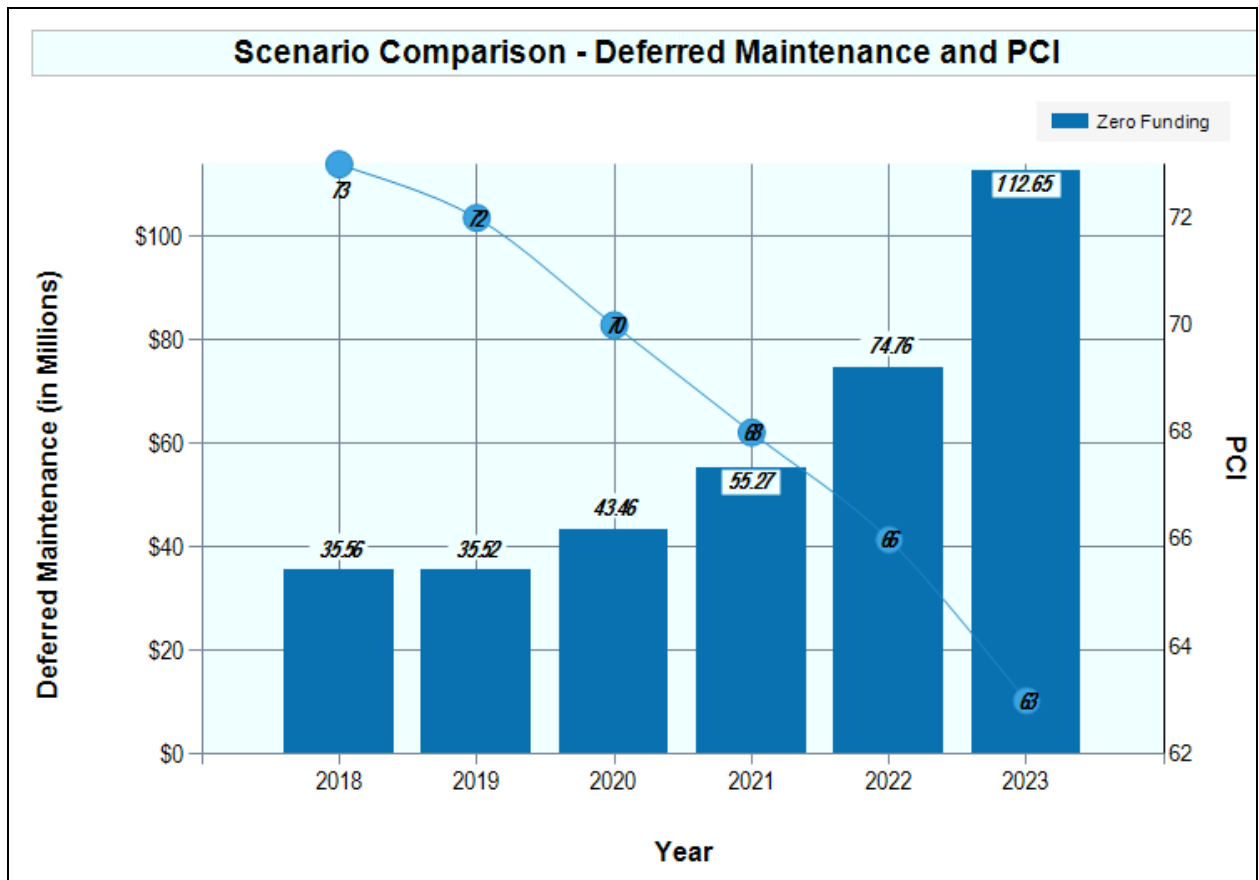

◆ **Recommended preservation program and costs**

A strategy was developed based on a 5-year maintenance cycle. The strategy objective is to reduce the backlog of street preservation work over the next 5 years and increase or maintain the overall condition of the road network. The strategy involves pavement resurfacing as preservation components.

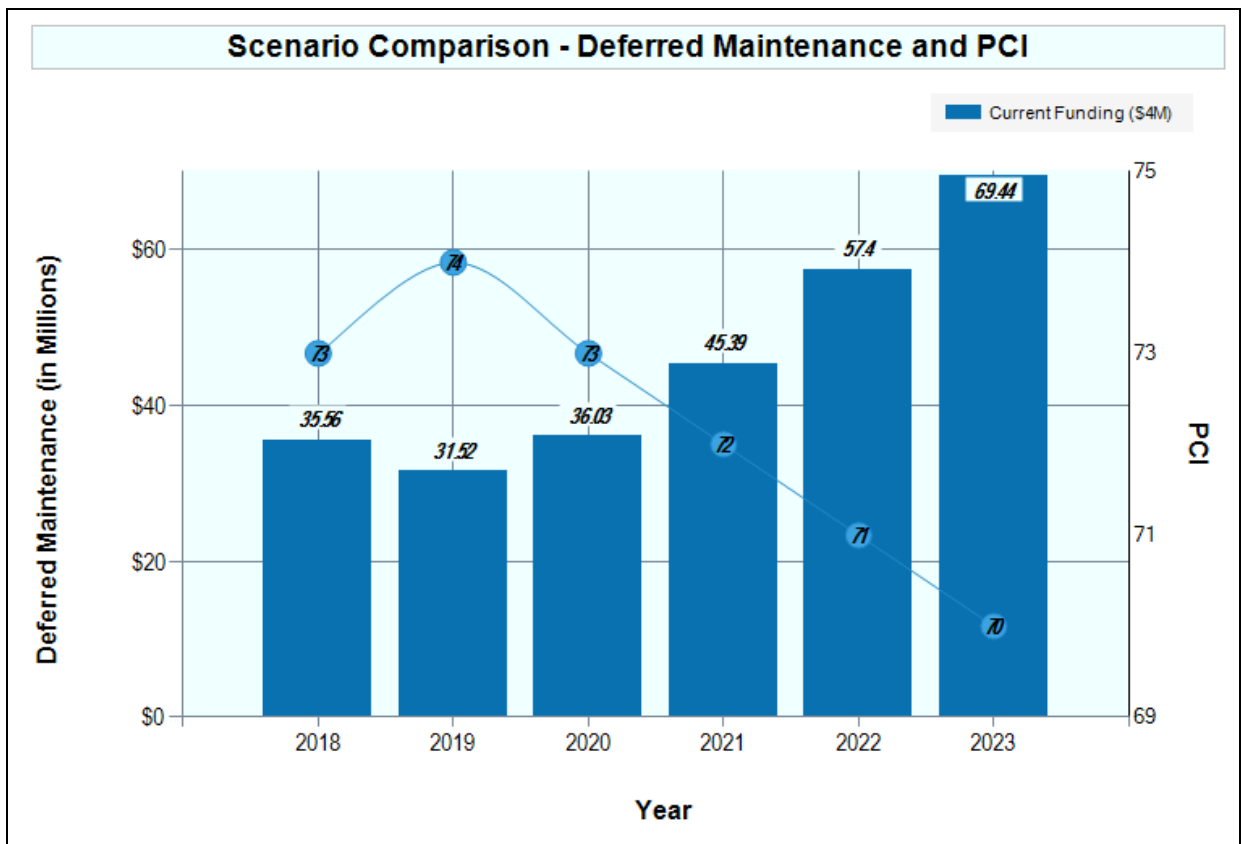

As part of this analysis, Harris used the standard pavement deterioration curves developed by Metropolitan Transportation Commission (MTC). These deterioration curves show that asphalt pavement has an expected life of approximately 25 years.

Pavement maintenance funding scenario results:

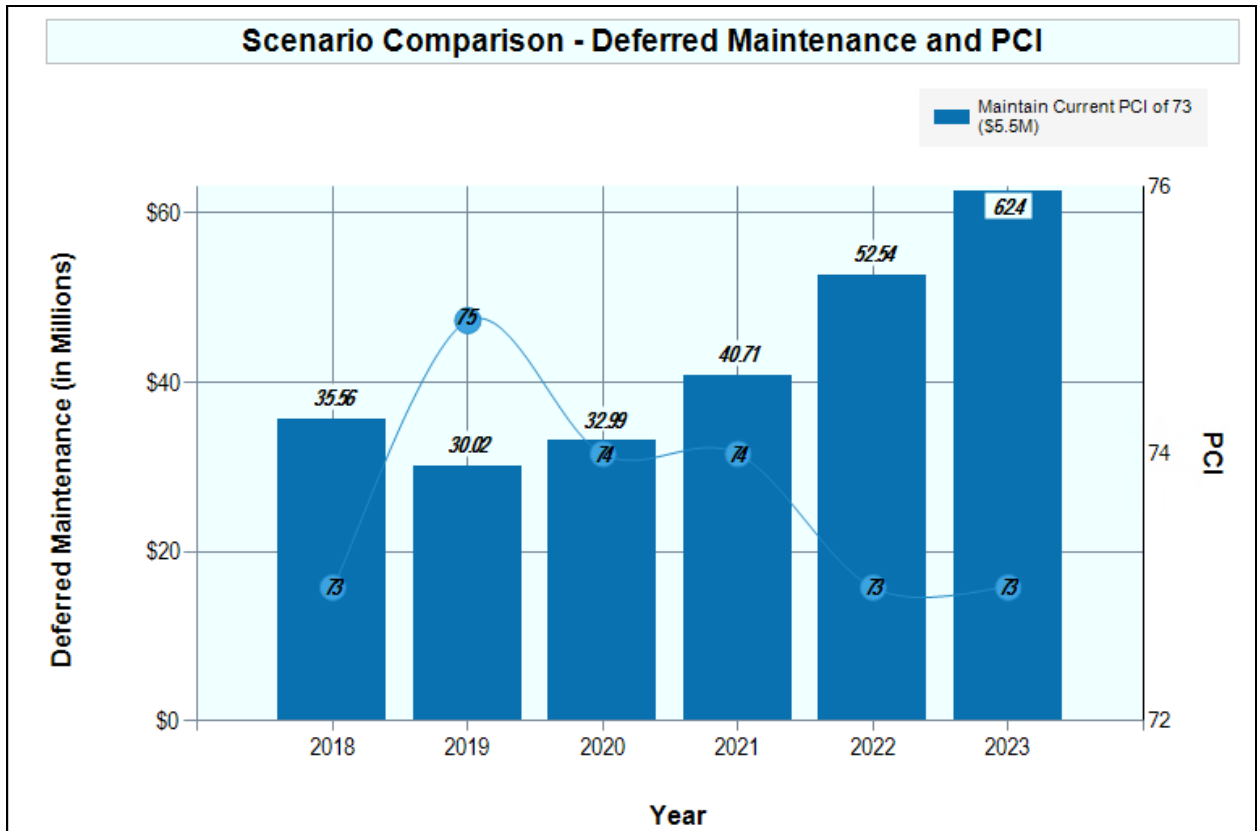

Zero Funding – If the City spent no money over the next 5 years on pavement maintenance needs, the amount of deferred maintenance (or “backlog”) citywide would increase from \$36 million to \$113 million and the citywide average pavement condition index would decrease from 73 to 63.

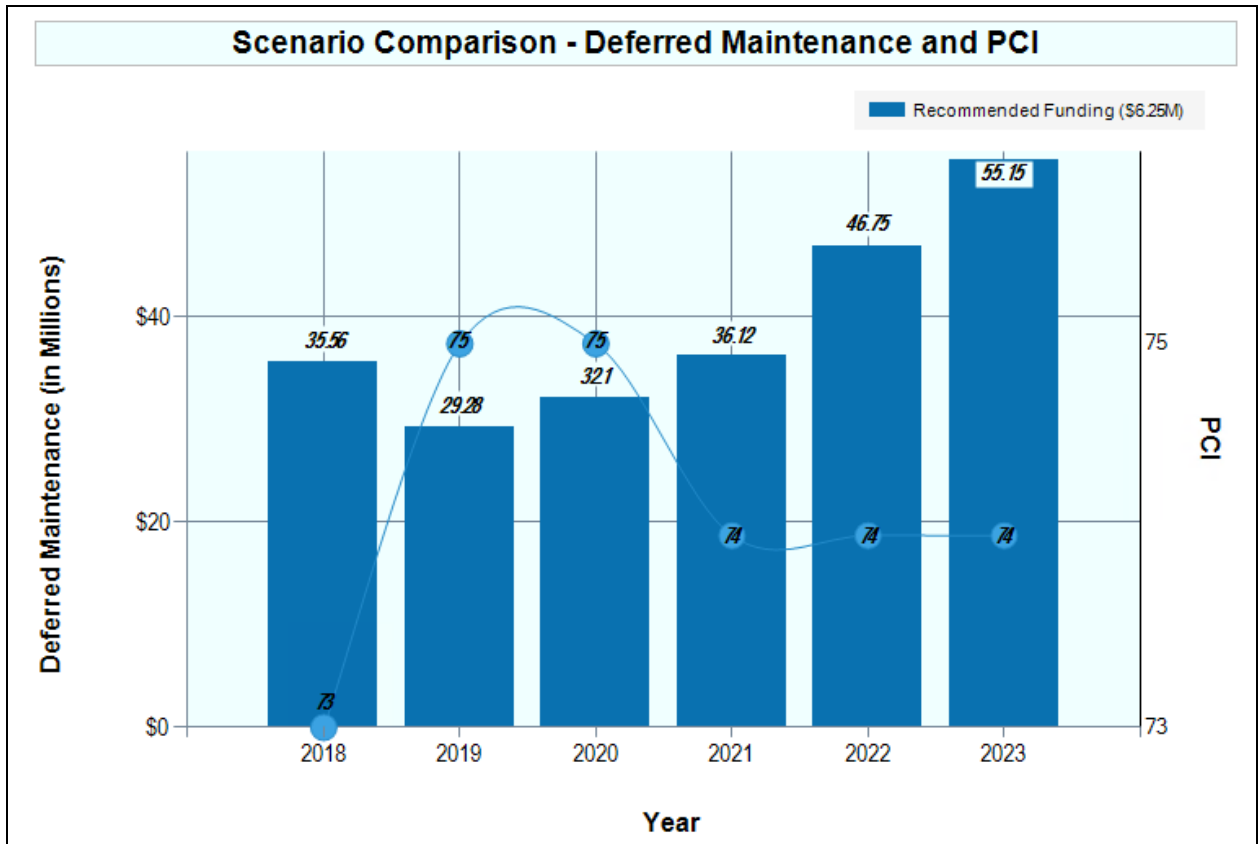

Current Funding (\$4M) – If the City continued to spend the same amount of money over the next 5 years on pavement maintenance needs, the amount of deferred maintenance (or “backlog”) citywide would increase from \$36 million to \$69 million and the citywide average pavement condition index would decrease from 73 to 70.

Maintain Current PCI of 73 (\$5.5M) – In order to maintain the citywide average PCI at 73 or above over the next 5 years, approximately \$5.5 million per year would need to be budgeted and the average amount of deferred maintenance citywide would be \$62 million.

Recommended Funding (\$6.25M) – It is recommended that the Agency spends an annual budget of a minimum of \$6.25 million. Spending this budget will increase the PCI from 73 to 74 after 5 years while slowing the growth of the deferred maintenance backlog.

Preventative maintenance on streets with better than average PCI ratings must be considered in combination with the more extensive rehabilitation of failing streets to realize the maximum net benefit and reduce the long term costs. The strategies herein were developed to provide alternatives for halting the deterioration of the existing pavement, reducing the backlog of street maintenance work over the next 5 years and improving the overall condition of the roadway network. These strategies generally involve the utilization of crack sealing, patching, slurry sealing, and major work typically consisting of pavement overlays, and reconstruction. Future roadway maintenance plans for the City Palm Springs should be based on the general maintenance strategies developed from this pavement system analysis in combination with the other major contributing factors.

SECTION I
INTRODUCTION

NEED FOR A PAVEMENT MANAGEMENT PROGRAM

The Pavement Management Program assists the City by providing current distress survey data used to evaluate current pavement condition. This helps to maintain a City-defined desirable level of pavement performance while optimizing the expenditure of limited fiscal resources. A PMP system is also required to obtain federal funds.

Specifically, the program provides administrators and maintenance personnel with:

- A current inventory of all public roadways
- The current pavement condition for all public roadways
- A project listing of all pavement needing maintenance, rehabilitation, or replacement
- The most cost effective level of maintenance or repair appropriate at the time of the survey
- A forecast of budget needs for maintenance, rehabilitation, or replacement of deficient pavement sections for a selected time period, at various alternative pavement condition levels

THE PAVEMENT NETWORK

The pavement network within the City of Palm Springs is comprised of 245 centerline (CL) miles of paved surfaces. To assist in planning maintenance needs, the City's road system data was compiled by functional classification, area and by neighborhood. The following is a summary of the mileage, area, average condition and replacement value of pavement.

Classification	Current						Ave. Condition
	Square Feet	CL Miles	Lane Miles	Unit Cost for Replacement	Total Replacement Value	Percent of Replacement Value	
Arterial	13,510,399	43	155	\$14.67	\$198,197,553	27%	77
Collector	10,109,018	45	97	\$14.67	\$148,299,294	20%	73
Residential	27,143,396	158	315	\$14.67	\$398,193,619	53%	71
Totals	50,762,813	245	567		\$ 744,690,467	100%	73

CURRENT PAVEMENT CONDITION

A visual survey of approximately 245 miles of the City’s Streets was conducted to assess the existing surface condition of each individual pavement segment. Streets with maintenance since 2016 were not surveyed. Upon completion of this survey, a Pavement Condition Index (PCI) was calculated for each segment to reflect the overall pavement condition. Ranging between 0 and 100, a PCI of 0 would correspond to a badly deteriorated pavement with virtually no remaining life. A PCI of 100 would correspond to a new pavement or pavement with no observed distresses.

The PCI may be weighted based on several factors that may be of special interest to the City, such as pavement distress or ride quality. For the purposes of this analysis, pavement distress was the only factor used to determine the current pavement condition

The table below relates PCI ranges to general pavement condition definitions

<u>PCI RANGE</u>	PCI Ranges	<u>CONDITION</u>
86 - 100		Good
71-85		Satisfactory
56-70		Fair
41-55		Poor
0-40		Very Poor

The overall condition of Palm Springs’s street network rests in the “Satisfactory” range with a weighted average PCI of 73.

OVERALL STRATEGY

Based on the results of the condition survey and input from the City, pavement maintenance/rehabilitation strategies were developed. A listing of the rehabilitation and maintenance activities utilized in the strategy development is presented in Section II. Each activity is representative of the types of work that have been programmed as part of the long term rehabilitation and maintenance requirements of the City’s street network. The City’s streets are comprised of Asphalt Concrete (AC).

The budgeting process was approached with the following in mind: generate a work program based upon actual road pavement conditions for AC pavements in order to keep deferred maintenance constant and maintain the current high level overall condition.

Based on current and projected pavement rehabilitation and maintenance needs, annual work programs have been prepared. The tables in the following pages show the projected work program totals along with the total deferred maintenance for each year.

All work program budgets generated are presented using only 5% inflation. All repair activities were based on distresses observed at the time of the field survey. No adjustments were made for cracking that may develop before work is actually completed.

◆ **Recommendations**

Harris & Associates also recommends the Agency spending an annual budget of a minimum of \$6.25 million. Spending this budget increase the PCI from 73 to 74 after 5 years while slowing the growth of the deferred maintenance backlog.

The City should utilize cost effective treatments where appropriate, such as slurry seals and crack seals and continue to evaluate emerging cost effective techniques like rubberized chip seals, thin-bonded wearing courses and rubberized overlays. Maintenance and rehabilitation performed should also be recorded in the pavement management program software.

Harris & Associates commends the City for its active participation in the pavement management program and also recommends that the City continue to maintain its pavement management program to be eligible for federal grants and funding. All arterials and collector routes should be re-surveyed every two years and all residential streets every four years. The costs for the distress surveys should be included in the annual pavement management budget.

The City should also perform annual database updates that include:

- Reviewing and updating the decision tree (maintenance activities and unit costs)
- Updating the street network when streets are annexed or newly constructed
- Continuing to include maintenance and rehabilitation activities

The City should update its Finance Department with any changes or adjustments that have been made to the City's street network and subsystems (streets assets and pavement subsystems that have been acquired through annexation, deletion, etc.) for GASB-34 compliance.

The City should continue utilizing the StreetSaver Online GIS module and/or in-house GIS to assist in managing the streets within city limits. GIS technology is very useful to spatially view tabular reports that are derived from the pavement management system, such as scenarios, identification of maintenance and rehabilitation treatments, planning, maintenance and rehabilitation history, pavement condition index, etc. The tool is very useful for exporting information out to current GIS and AutoCAD programs.

Palm Springs's overall street system is currently in the range of the City's "Satisfactory" condition category. To help maintain and improve the current condition, certain projects have been recommended within the context of this program. Annual work programs for the expected annual budgets can be found in Section V. The report provides detailed listings of suggested maintenance projects for Palm Springs based on the overall PMP suggested needs funding and base annual budgets. The report also provides a first step in identifying segments to be repaired under Palm Springs's annual work programs.

Although these project listings are recommendations generated by the PMP, they are for planning purposes only and are not intended to replace sound engineering judgment. Draft project recommendations should be weighed against the actual approach the City wishes to utilize in scheduling the workloads for contracting purposes. Once a street segment is identified for repair, a closer site survey and detailed project repair scope is required.

SECTION II

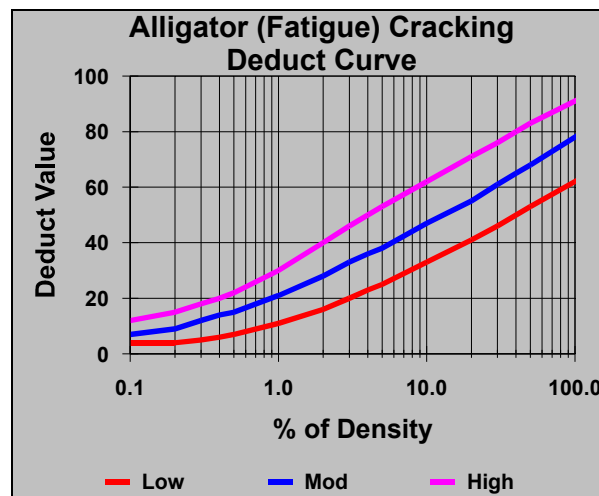

METHODOLOGY

The following section provides a description of the methodology and rationale utilized in determining the recommended actions identified in this report.

Field Survey

For this update, all the paved Streets in Palm Springs’ system were distress surveyed except for streets that received maintenance since 2016. Data, including distress types and quantities, segment length and width, etc. were collected for all surveyed streets. Using a combination of city street and online maps to collect field information, a field crew visually surveyed each of these streets. Data was categorized by street and “pavement” segment. Pavement segment limits were identified by determining the logical maintenance practices that would apply to each street and may vary from street to street, i.e. intersection to intersection, change in pavement width, drainage conditions, crown of the roadway, etc. All survey data was entered into the pavement management software (StreetSaver® Online Version 9.0)

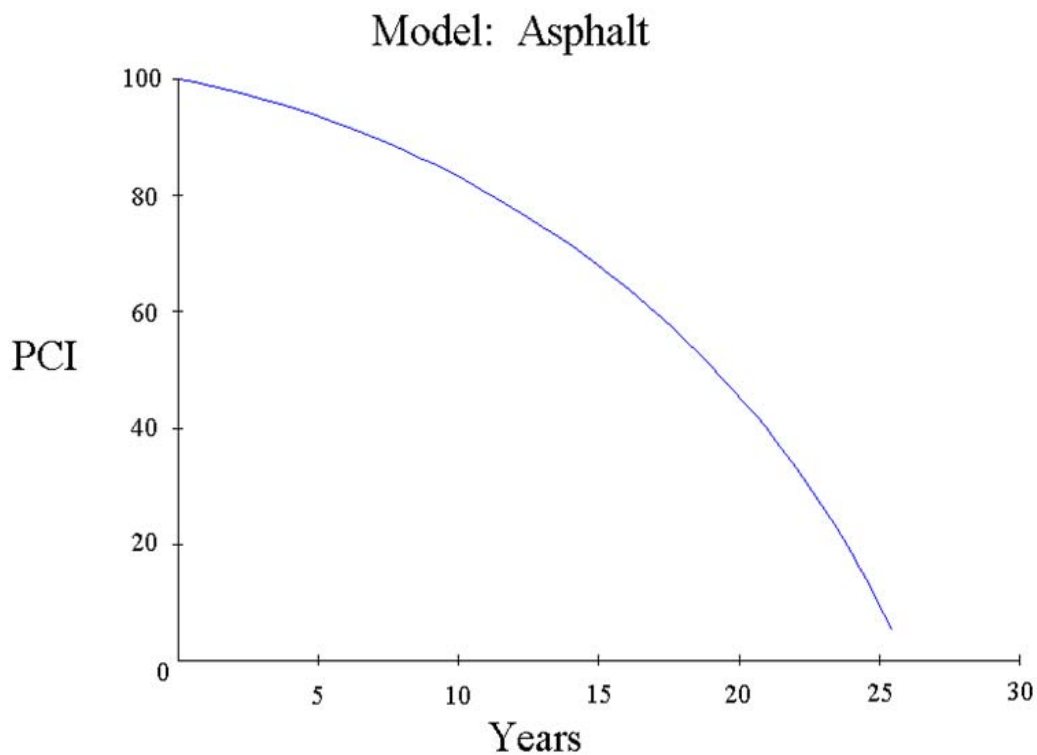

After the data entry procedures were completed, a distress rating was calculated for each segment. The distress rating is calculated using StreetSaver® developed algorithms. The algorithm assigns each pavement section a score of 100 then deducts point values based on the pavement distresses found within the section weighted by the quantity of each distress. The algorithm assigns deduct values based on the severity (see Figure below) and the density of each distress. There is a similar algorithm and deduct curve for each distress type.

The algorithm weighs the total deduct value within a section and calculates a total distress rating between 0 (failed) and 100 (excellent).

The PCI is an overall measure of the condition of the street surface based on this scale. The summary of all street condition data and the representative PCIs are located in the Section Listing PCI Report in Section IV of this report.

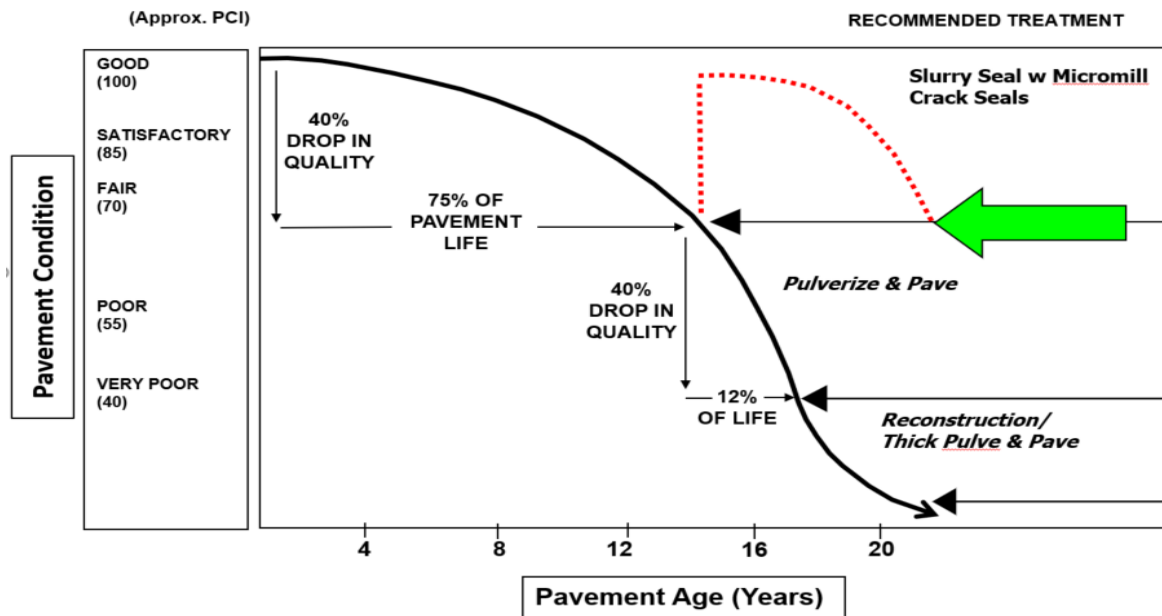

Once the PCI has been established for a pavement section, budget analyses and workload predictions commence. Predictions of future pavement performance are based on a pavement deterioration curve. As a pavement ages, the system predicts the PCI of the pavement based on the deterioration curve. The deterioration curve below shows the expected deterioration rate for Asphalt Concrete (AC).

Standard Deterioration Curve for Asphalt Concrete (AC) Pavements
Expected Useful Life of Approximately 25 Years

As a pavement ages, the system predicts the PCI of the pavement based on the deterioration curves. The next step in the analysis is to determine at what point simple maintenance has become major rehabilitation.

PAVEMENT MANAGEMENT – APPLYING A COST EFFECTIVE TREATMENT

Pavement generally deteriorates according to a certain pattern. The figure above is a model of this pattern, shown as a graph of pavement condition versus time. Please note that this figure is not to scale. A Street’s pavement begins its life in good condition and remains in good condition for a few years, without need of any maintenance. Over time, however, the condition of the street will worsen, and the rate at which its pavement condition deteriorates will increase dramatically as the street passes the midpoint of its life. As a result of this continued deterioration, the quantity and cost of the maintenance activities needed to rehabilitate the pavement will increase in both scope and costs. It is at this point that pavement repair options must be weighed

Preventative maintenance treatments like a slurry seal w/ micromill and crack sealing is currently costing the City about \$4.05 per square yard, while a pulverize and pave is costing about \$26.00 per square yard, and a reconstruction is costing about \$132.00 per square yard. You can see by the green arrow in the above graphic, by doing preventative maintenance on a pavement earlier in the pavements life, a substantial amount of money can be save and it extends the life of the pavement.

Table below describes the condition categories, their equivalent PCI range, and typical prescribed maintenance treatments:

Agency's Maintenance Treatments by Condition Category		
Condition	PCI Range	Typical Maintenance Treatment
A – Good	86-100	Do Nothing.
B – Satisfactory	71-85	Slurry Seal with Micromill and Crack Seal
C - Fair	56-70	Pulverize & Pave or Grind & Overlay 2”
D - Poor	41-55	Heavy Pulverize & Pave
F - Very Poor	0-40	Reconstruct Structure

Table created by Harris & Associates based on feedback from the City.

MAINTENANCE STRATEGY ASSIGNMENTS

The PCI is used by the system to schedule maintenance activities for each pavement segment. The PMP software recommends a specific maintenance activity based on the PCI and budget constraints. The City has selected a series of maintenance activities to apply to the pavement network. Definitions of each maintenance activity per category are defined as follows:

1. Crack Seals - A surface treatment generally utilized to prevent entry of water or other non compressible substances into the pavement.

Crack seals are used to fill individual pavement cracks to prevent entry of water or other non-compressible substances such as sand, dirt, rocks or weeds. Crack sealant is typically used on early stage longitudinal cracks, transverse cracks and reflection cracks. It is placed over the existing pavement surface and is typically applied by the City at three (3) year intervals.

2. Slurry Seals - A surface treatment generally utilized to provide new wearing surfaces and prevent water penetration of the pavement surface, thereby extending pavement life.

Slurry seals are surface treatments applied to pavements with minimal surface distress to provide new wearing surfaces and extend pavement life. A slurry seal generally consists of a mixture of conventional or latex-modified emulsified asphalt, well-graded fine aggregate, mineral filler and water. It is placed over the existing pavement surface and is typically applied by the City at five (5) year intervals. The City’s cost for a slurry seal with micromill/crack seal is \$4.05 per square yard.

3. Overlays - The application of treatments that are more cost-effective alternatives to reconstruction of the entire pavement surfaces, but provide the required structural support.

An asphalt layer is placed over the existing pavement surface. Cold planing is typically performed prior to the overlay to provide a level surface for the overlay, reduce excessive crowning, and assure alignment with existing gutter line. This typically includes base repair and crack sealing prior to the application of an overlay. This treatment provides a new wearing surface and increased structural strength to the pavement section. An overlay is typically designed for a ten to fifteen (10-15) year life. The City’s cost for Grind and 2” overlay is \$20.25 per square yard.

4. Pulverize and Pave - A process that grinds up existing surface layers right in place, blending the asphalt layers with any sub-layers, essentially creating a new paving mix using all the old materials.

Pulverizing is the first stage in reusing asphalt to repave the same area. Pulverization leaves several inches of ground up asphalt where old asphalt paving used to be. This makes it possible to then reform that asphalt into a solid surface through stabilization.

This type of treatment was estimated by the City to cost \$26.00 per square yard.

5. Reconstruction – The removal and replacement of either the pavement surface only or both the pavement and base.

Palm Springs’s typical cost for reconstruction is \$132.00 per square yard. After a reconstruction, the pavement segment is again considered new with a full life extension (typically 28 years).

MAINTENANCE DECISIONS

Once the City has selected the appropriate maintenance activities and calculated unit costs, the “Maintenance Decision Tree” was updated. This decision tree assigns appropriate treatments by the specific needs of the streets.

The decision tree lists costs associated with treatments on specific types of pavement according to the jurisdiction. StreetSaver® uses a decision tree to model the decision-making process that agencies follow to select a maintenance or rehabilitation strategy. The decision tree contains "branches" for each functional classification, surface type, and condition category. Jurisdictions can outline their maintenance and rehabilitation strategy, choosing a treatment for each branch.

After a decision tree is established, selected budgets and work assignments were generated for each work program on an annual basis. Using the pavement deterioration curve for each pavement surface type and functional class, StreetSaver calculates the PCI based on the condition survey; then depending on what category the PCI is in, a preventive maintenance or rehab treatment is selected based on weighted effectiveness and available budget. Both current and future work requirements for each pavement segment within the city were then determined.

◆ Budget Analysis Results

After the PMP software analyzes the pavement system according to the specified annual budget over a period of five (5) years, trends are evident in the PCI and deferred maintenance backlog (the amount of necessary reconstruction and overlays not performed each year due to budget constraints). An increase in deferred maintenance shows that necessary rehabilitation is not being performed. The total deferred maintenance in 2018 before any suggested maintenance is performed is about \$36 million.

Deferred maintenance consists of pavement maintenance that is needed but cannot be performed due to lack of funding. Shrinking budgets have forced many agencies to defer much needed street maintenance. Deferring maintenance not only increases the frequency of resident complaints about the network condition, but also increases the costs to repair the streets. It is cost effective to keep the pavement above a certain PCI because the cost to maintain a high PCI is less than the cost to bring a street segment with a low PCI to a high PCI.

PROJECTED WORK PROGRAMS

In developing an annual expenditure level required to maintain the City's street network.

Four (4) budget scenarios were studied:

1. Zero Funding
2. Maintain Current Funding
3. Maintain Current PCI of 73
4. Recommended Budget

The following terms are defined for this sub-section:

“Average Condition” – The projected average pavement Condition Index after completion of the Work Program.

“Budget” – The projected budget for the given year

“Backlog” – Same as Deferred Maintenance

“Deferred” or **“Deferred Maintenance”** – The amount of money projected for pavement maintenance that cannot be performed due to the lack of funding. It is calculated by taking the total pavement maintenance needs less the work program.

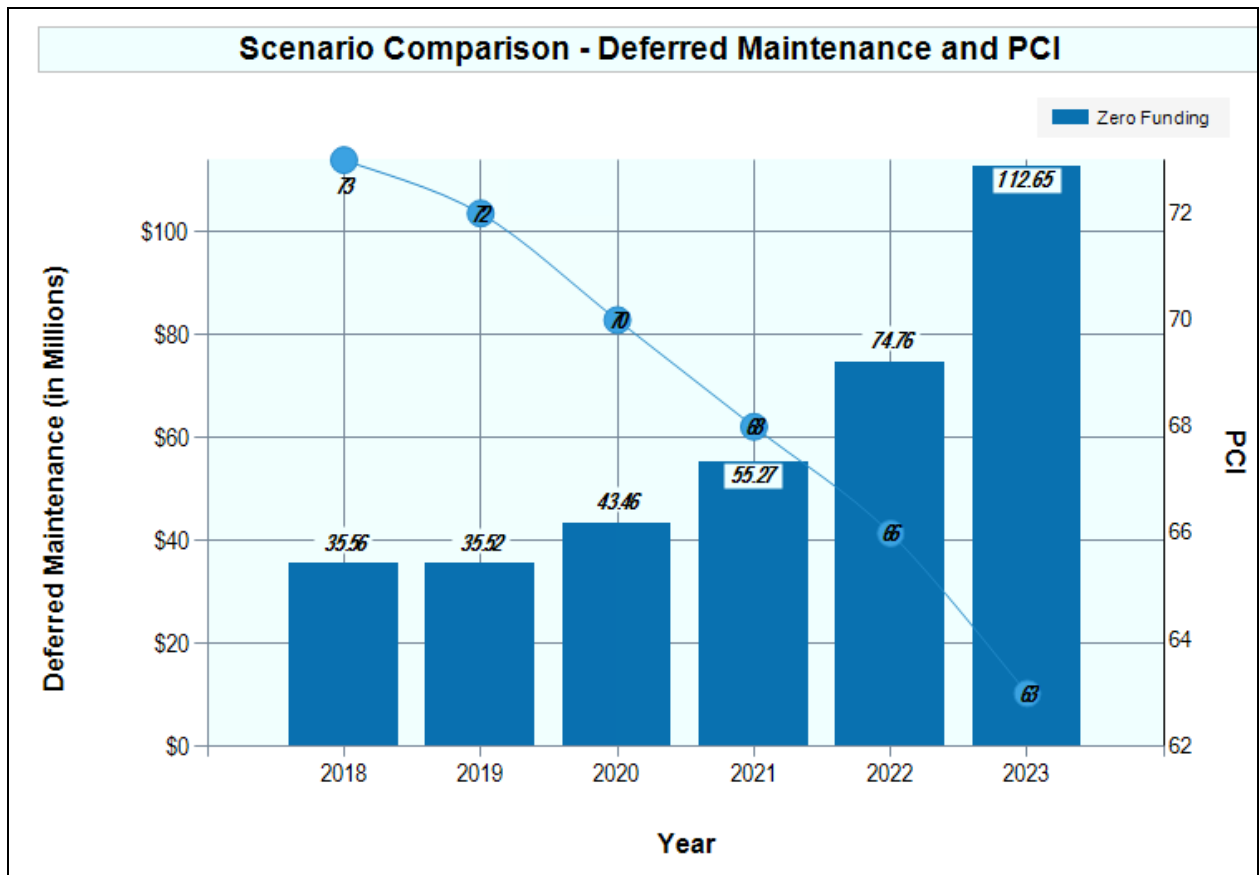

“FY” or **Year”** – Year of the program

“Needs” – The amount of money forecasted to maintain the City's street network, by entering variables for an inflation rate, interest rate, and a specified number of years of pavement life, usually 20 years.

“Work Program” – The amount of money programmed to be expended, not to exceed the budget, based on the pavement maintenance needs as prioritized.

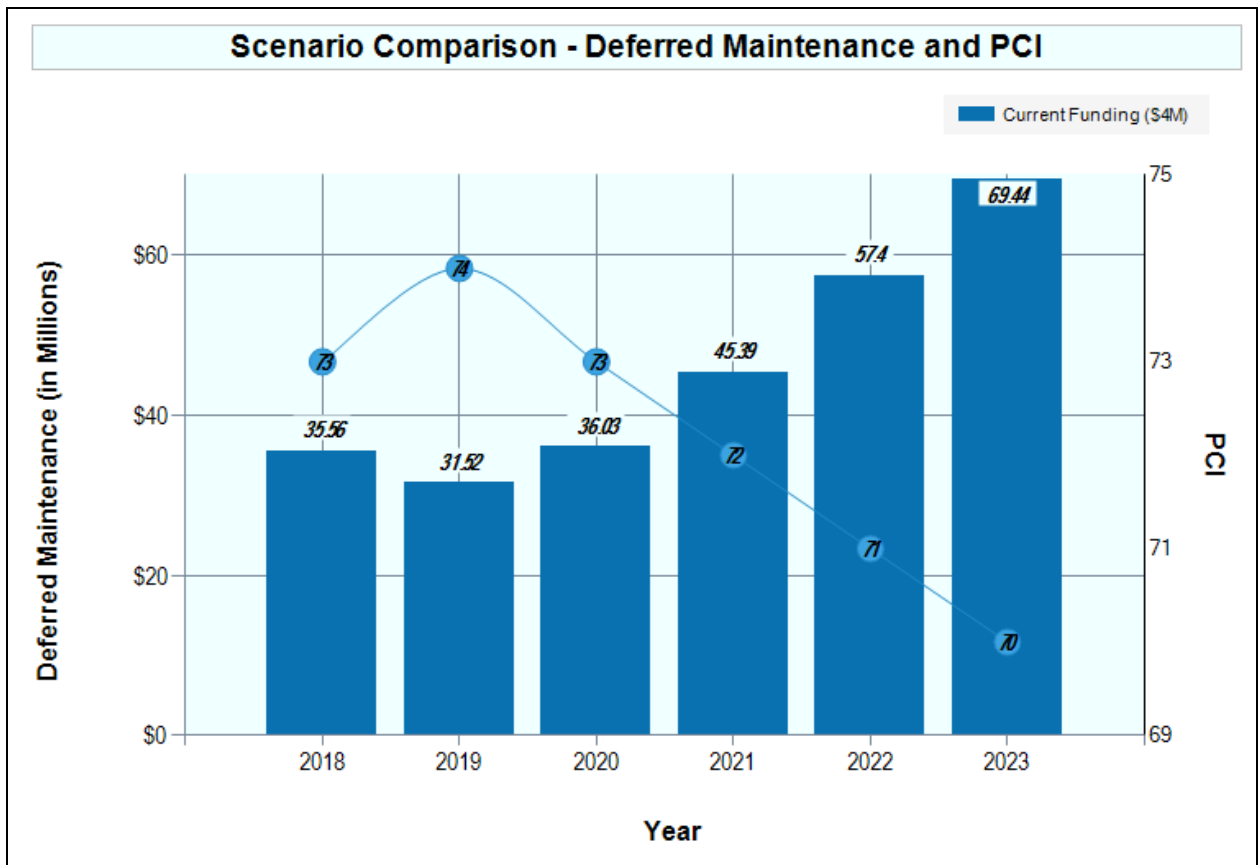

Zero Funding – If the City spent no money over the next 5 years on pavement maintenance needs, the amount of deferred maintenance (or “backlog”) citywide would increase from \$36 million to \$113 million and the citywide average pavement condition index would decreased from 73 to 63.

FY	Budget	Work Program	Deferred (Citywide)	Average Condition (Citywide)
2019-20	\$0	\$0	\$ 35,521,508.00	72
2020-21	\$0	\$0	\$ 43,456,555.00	70
2021-22	\$0	\$0	\$ 55,272,710.00	68
2022-23	\$0	\$0	\$ 74,755,992.00	66
2023-24	\$0	\$0	\$112,653,271.00	63

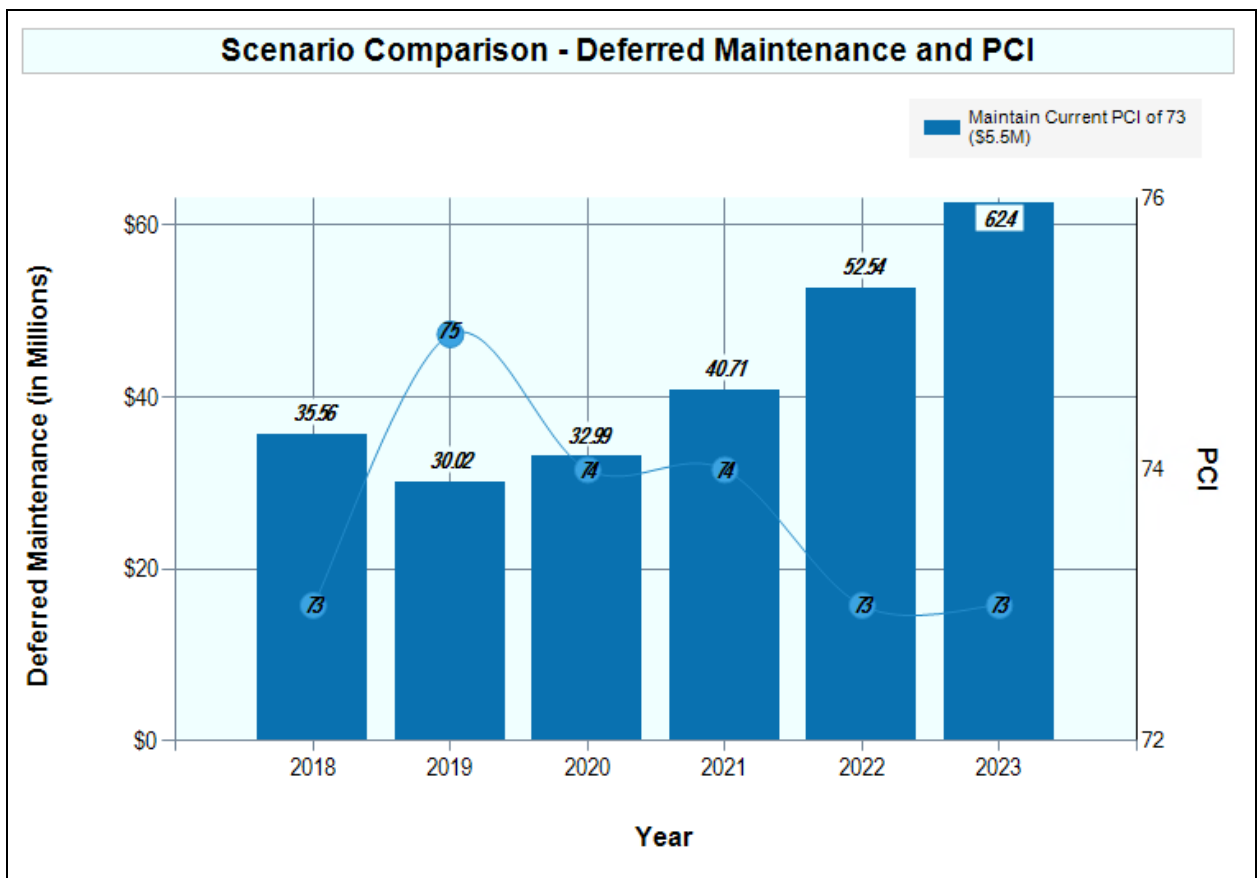

Current Funding (\$4M) – At the City’s current expected pavement maintenance budget over the next 5 years of approximately \$4 million annually, the amount of deferred maintenance citywide would increase from \$36 million to \$69 million and the citywide average pavement condition index would decreased from 73 to 70.

FY	Budget	Work Program	Deferred (Citywide)	Average Condition (Citywide)
2019-20	\$4,000,000	\$3,999,744	\$ 31,521,860.00	74
2020-21	\$4,000,000	\$3,993,836	\$ 36,029,860.00	73
2021-22	\$4,000,000	\$3,993,743	\$ 45,386,104.00	72
2022-23	\$4,000,000	\$3,997,677	\$ 57,401,832.00	71
2023-24	\$4,000,000	\$3,998,745	\$ 69,443,363.00	70

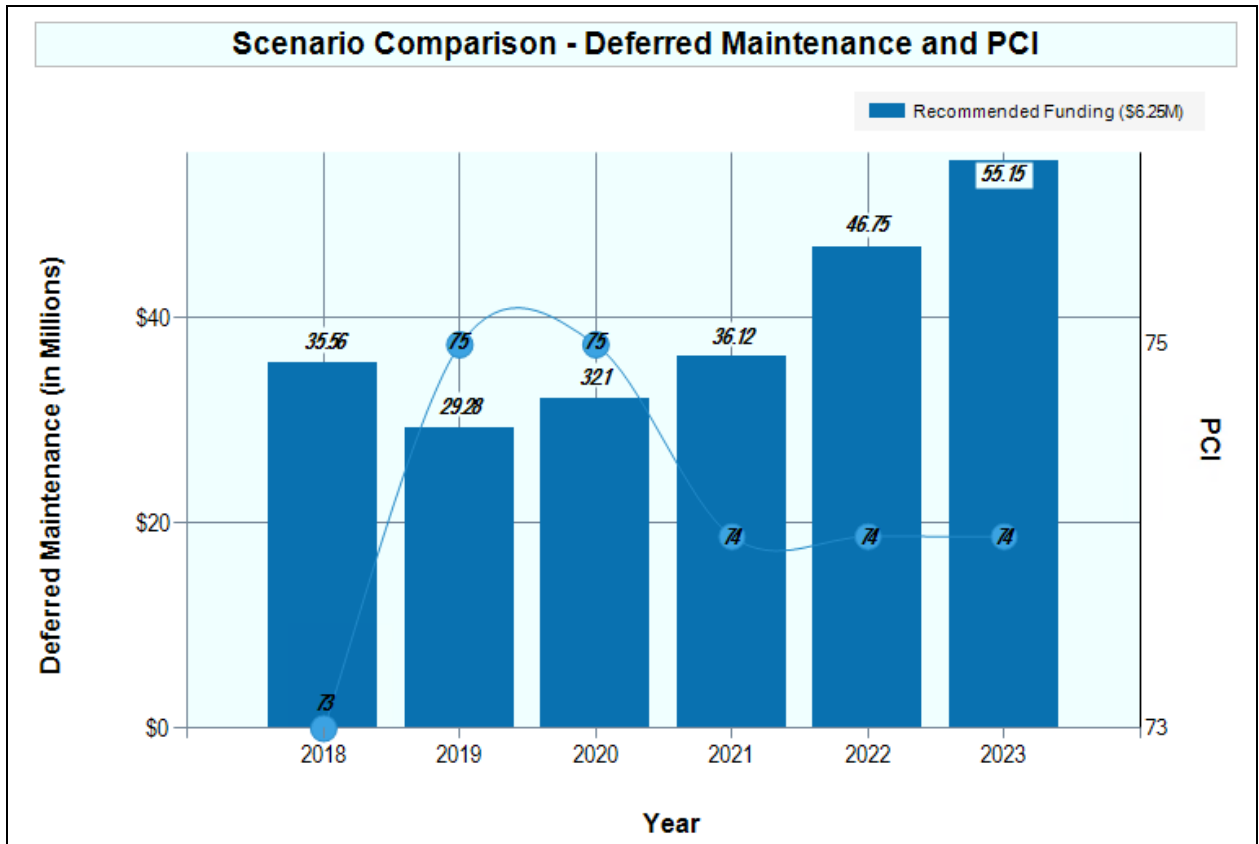

Maintain Current PCI of 73 (\$5.5M) — In order to maintain the citywide average PCI at 73 or above over the next 5 years, approximately \$5.5 million per year would need to be budgeted and the average amount of deferred maintenance citywide would be \$62 million.

FY	Budget	Work Program	Deferred (Citywide)	Average Condition (Citywide)
2019-20	\$5,500,000	\$5,499,007	\$ 30,022,601.00	75
2020-21	\$5,500,000	\$5,493,480	\$ 32,992,230.00	74
2021-22	\$5,500,000	\$5,497,844	\$ 40,711,151.00	74
2022-23	\$5,500,000	\$5,499,885	\$ 52,536,492.00	73
2023-24	\$5,500,000	\$5,494,002	\$ 62,395,582.00	73

Recommended Budget (\$6.25M) – It is recommended that the Agency spends an annual budget of a minimum of \$6.25 million. Spending this budget increase the PCI from 73 to 74 after 5 years while slowing the growth of the deferred maintenance backlog.

FY	Budget	Work Program	Deferred (Citywide)	Average Condition (Citywide)
2019-20	\$6,250,000	\$6,240,458	\$ 29,281,153.00	75
2020-21	\$6,250,000	\$6,243,817	\$ 32,095,364.00	75
2021-22	\$6,250,000	\$6,244,449	\$ 36,122,794.00	74
2022-23	\$6,250,000	\$6,245,135	\$ 46,754,794.00	74
2023-24	\$6,250,000	\$6,243,294	\$ 55,147,915.00	74

PAVEMENT MANAGEMENT PROGRAM REPORTS

This report contains a comprehensive assemblage of pavement management reports ranging from summary reports to annual maintenance and rehabilitation schedules. These reports represent reasonable projections of pavement maintenance needs and performance based on visual condition assessments, unit cost estimates, and pavement deterioration models.

It is important to note that pavement segment dimensions and surface area, along with the recommended treatment and repair costs as presented in the reports, are for initial planning purposes only and will be subject to project level evaluation, design, and cost estimation. This is noteworthy due to the "implied" accuracy of reporting length and width to the nearest foot, surface area to the nearest square foot, and treatment and repair unit costs and project estimates to the nearest penny and dollar, respectively.

SYSTEM MAINTENANCE

It is recommended that the City continue developing annual maintenance plans while also working towards reducing the City's present backlog of rehabilitation projects.

In order to ensure that report outputs are accurate and credible, it is essential that the integrity of all data files be maintained. Prior to generating scenarios, all necessary updates to unit cost information and treatment data should be complete. In addition, the entire pavement network will have to be re-surveyed at regular intervals, as noted earlier in this report. This will not only allow work to be scheduled based on the most current condition data available, but it will also provide City personnel with a means to monitor rates of pavement deterioration with better accuracy.

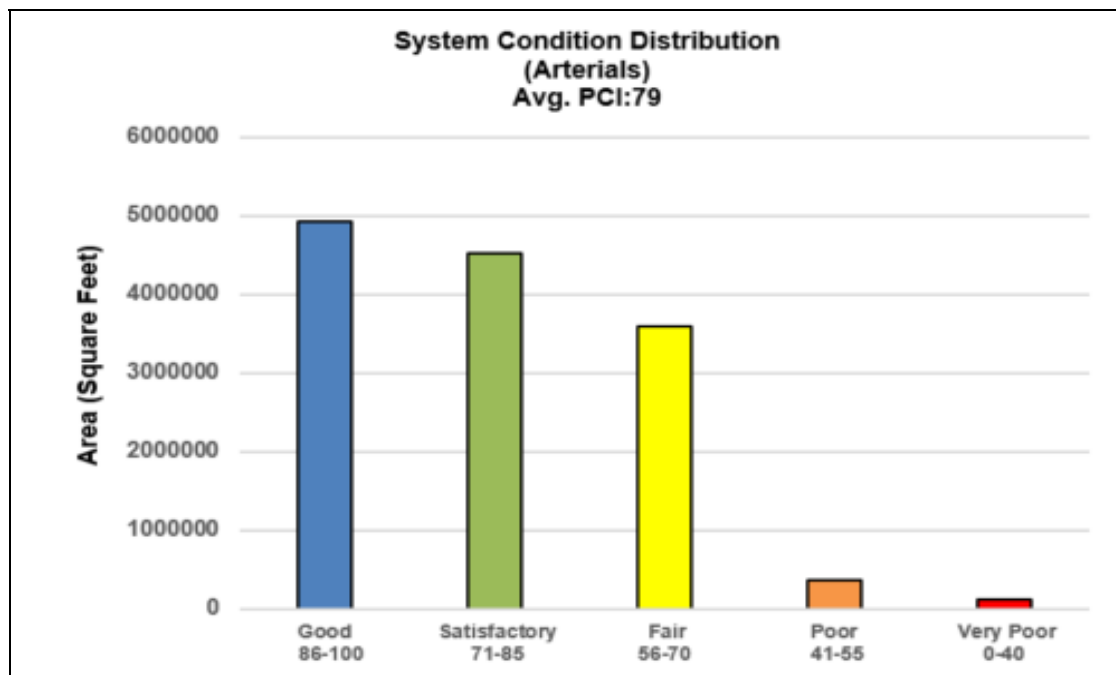

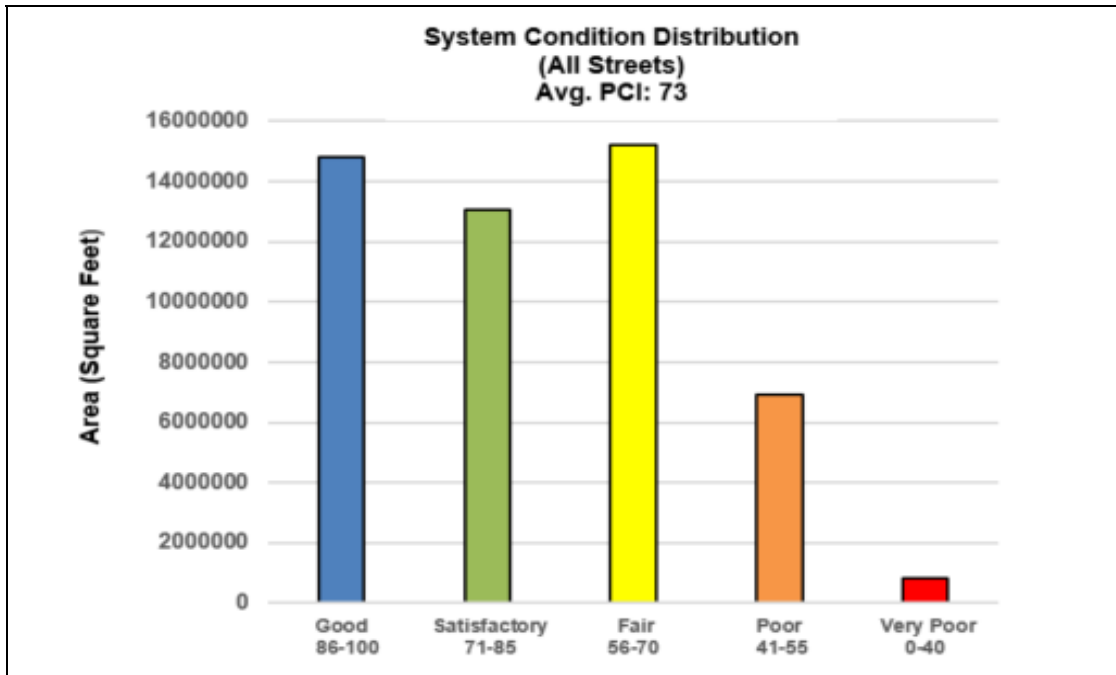

SECTION III
CONDITION DISTRIBUTION REPORT

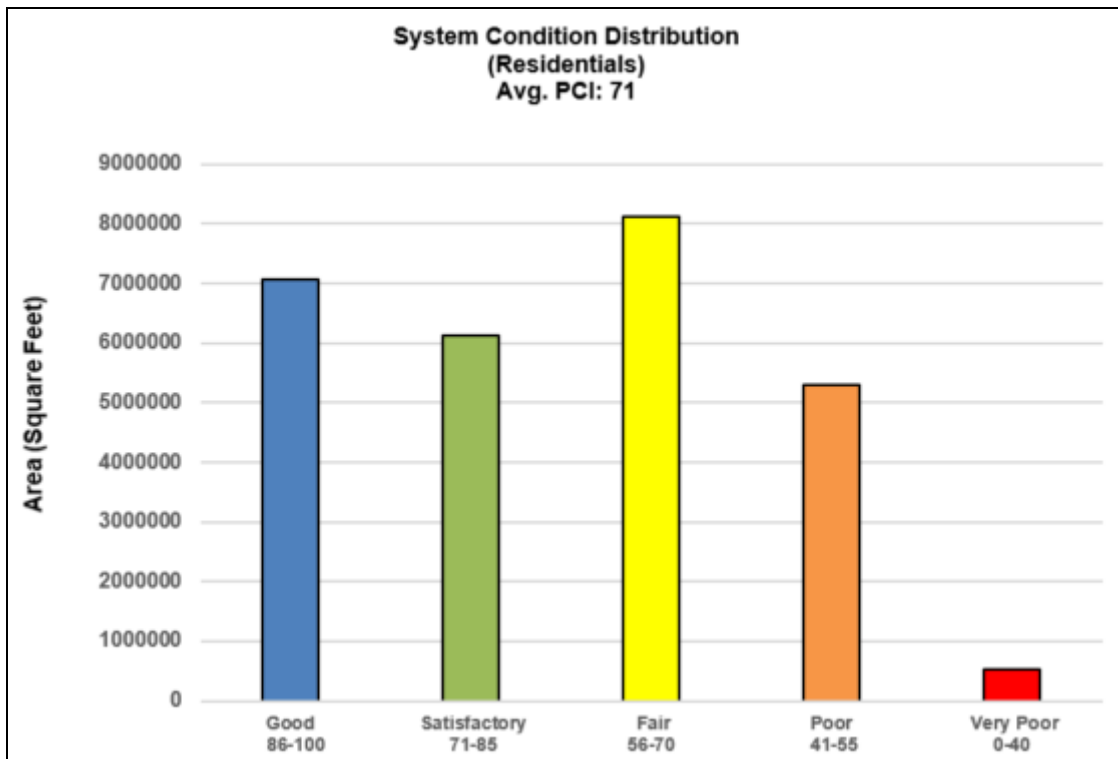

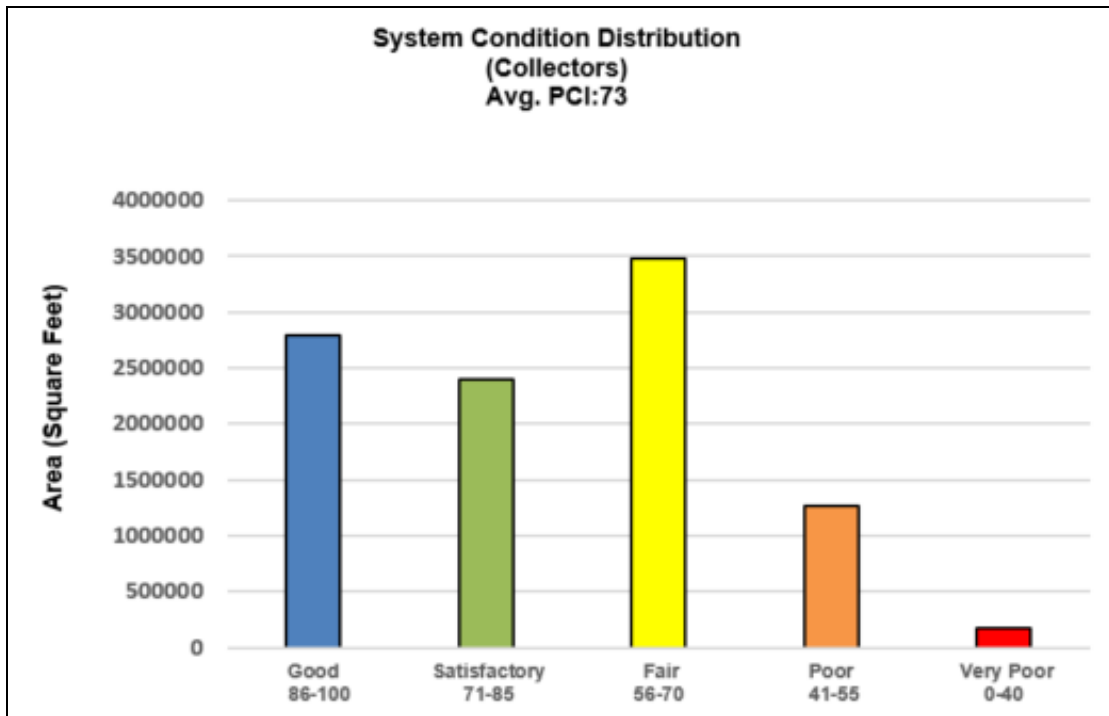

This report graphically depicts the distribution of the pavement condition throughout the street network by pavement area. The condition ranges from a PCI of 0 “Very Poor” to 100 “Good”, with a “Good” condition corresponding to a pavement at the beginning of its life cycle, and “Very Poor” condition representing a badly deteriorated pavement with virtually no remaining life. The tables on the following pages show the general description for each pavement condition:

Condition	PCI Range	Description
Good	86 - 100	No significant distress.
Satisfactory	71 - 85	Little distress, with the exception of utility patches in good condition, or slight hairline cracks; may be slightly weathered.
Fair	56 - 70	Slight to moderately weathered, slight distress, possibly patching.
Poor	41 - 55	Severely weathered or slight to moderate levels of distress generally limited to patches and non-load-related cracking.
Very Poor	0 - 40	Severely distressed or large quantities of distortion or alligator cracking. Failure of the pavement, distress has surpassed tolerable rehabilitation limits.

PCI summary by Street Classification:

	Ave PCI 2014	Ave PCI 2018
Arterials	76	79
Collectors	71	73
Residential	65	71
All Streets Combined	69	73

SECTION IV

SECTION LISTING PCI REPORT

Listed alphabetically by street name, this report provides the City with a listing of pertinent inventory and pavement condition data for each pavement section within the City's pavement network. The Pavement Condition Index (PCI) Report notes the names, limits, classification, dimension, pavement class and PCI as of the last inspection for each pavement section.

Detailed descriptions of the information appearing on this report are presented below:

Road Name:	Street Name of the Section
BegLocation:	Beginning Limits of the Section
EndLocation:	End Limits of the Section
Length:	Length of Section (LF)
Width:	Width of Section (LF)
Functional Class:	Type of Street for Section (Arterial, Collector, Residential)
Neighborhood:	Organized Neighborhoods of Palm Springs (ONE-PS)
2014 PCI:	Pavement Condition Index (PCI) number in 2014 report
2018 PCI:	Current Pavement Condition Index (PCI) number
