Description of Maintenance:

Sculpture is made entirely of steel, painted with exterior grade metal enamel which is very durable and easy to clean and touch up as needed. We will source the paint from a vendor which will allow for long term re-purchasing of paint colors, so as repainting is necessary it will be a straightforward process to acquire materials.

Description of Materials:

Sculpture is made entirely of steel, painted with exterior grade metal enamel. Arches will be precisely bent with CNC bender. Lowest arch is over six feet high at the interior apex. Tallest arch is eleven feet high at interior apex. Skin will be perforated steel with support members as needed. In the design stage the percentage of shade created can be adjusted by making changes to the perforation design.
